

# Stage 5

## Multiplication & Division Proportional

**Stage 5**  
Multiplication & Division Strategies

Use repeated addition

$6 \times 3 = \square$

To solve this question I will need to use repeated addition.

$3 + 3 + 3 + 3 + 3 + 3 =$

so  $6 \times 3 = 18$

**Stage 5**  
Proportional Strategies

Using repeated addition or subtraction

$\frac{1}{3}$  of 15 =  $\square$

I know that  $\frac{1}{3}$  means 3 evenly sized pieces, so that means that I need to split 15 evenly into 3 pieces.

I know from my addition knowledge that  $5 + 5 + 5 = 15$

so  $\frac{1}{3}$  of 15 = 5
